

PhD Research Projects

- 1) Identification of novel neuronal Factor in the Habenula Neurons during Social Stress**
- 2) Serotonergic - Spexin Interactions in Social Hierarchy**

Supervisory Team: Dr. Tomoko Soga and Prof. Ishwar Parhar

We are looking for candidates that are highly motivated and keen to pursue their postgraduate degree (PhD) in the field of neuroscience for the above-mentioned projects. These projects aim to identify neuronal factor and the physiological effect and role of the factors under the social stress. Also, we would like to look into molecular factor and its association to the conventional neurotransmitter that has shown essential role under social stress. If you are interested, please email your latest CV, a statement of why you are interested in pursuing postgraduate studies in the field of neuroscience to the following address mum-neuroscience@monash.edu. Further details of the project will be discussed with the successful candidates.
